

## **Background**

Adewale is a professional Information Technology engineer, a poet, an independent researcher and a theorist in Political Economy, Regional Integration, International Organizations and International Relations for advancing the study of Global Governance. He has recently unmasked the Multilateralism 2.0 Vision that was previously impossible from Web 2.0 Metaphor. In so doing, he has unleashed network thinking and practices in Global Governance that would transform the United Nations System into the form of an Ideal Global Union (The Multilateralism 2.0), as the built Intercontinental System.

Adewale is currently testing his Unified World System and its dependent Theories for implementing the Next-core of Global Governance Model: The Intercontinental Relations in a Multiregional Space Equation for eliminating global inequality, balancing global political economy, creating a citizen-centric, all inclusive and open multilateral governance system at local, regional and global level.

Adewale is a member of Athens Institute for Education and Research, and the Academic Council on the United Nations System. He is a holder of a Master degree in International Affairs and Diplomacy from the Ahmadu Bello University Zaria, and a B.Eng. in Electrical/Computer Engineering from the Federal University of Technology Minna, Nigeria.
