

Aineias Gkikas is a Research Fellow in SME Growth and Development, Birmingham City University Business School and is currently completing his PhD in Economic Geography, Cardiff University. Aineias is interested on research concerning the growth and performance of small and medium-sized enterprises (SMEs) from an international perspective. His research concentration is growth and performance of SMEs, focusing on developing global insights into SME growth and performance helping to inform the way smaller businesses work, grow and prosper in the economy. The motivation for choosing to study small-medium enterprises (SMEs), regions, innovation, and growth, is the fact that even though over 95% of businesses globally are SMEs, little is known about how they innovate, grow and perform. There is limited research addressing the dynamics, contextual nature of SMEs and their leaders/entrepreneurs, and the entrepreneurial dynamism that underpin the wider growth and performance trajectories (i.e. network capital, human capital, social capital). Aineias has taught at both Cardiff and University College London and presented research at national and international conferences. His role within the Centre for Enterprise, Innovation and Growth (CEIG) is progressing research on SME development in international contexts, collaborating with businesses and Universities across the world including Greece, China, Indonesia and Slovenia.
