

Biographical Note

I am an organized and ambitious multi-lingual PhD research student in Economics, with excellent verbal skills, multi tasking skills and presentation skills. I am an Associate Fellow of the Higher Education Academy in the UK with demonstrated ability for teaching at both undergraduate and postgraduate level. I am passionate about research of the highest quality in the field as well as able to demonstrate potential for internationally recognised research. Expertises include: financial and macroeconomic research, teaching, assessing and supervising undergraduate students, quantitative software analysis (SPSS, STATA, EXCEL) and qualitative software analysis (NVIVO).

By employing a critical perspective in the analysis of the macro economy of small open economies in a situation of crisis I believe that my research provides both empirical and theoretical contribution to the area of economic science. The ongoing process of globalisation between neighbouring countries reflects the need for better understanding of the economic interrelationship and the necessity to strengthen the vulnerable economies in this changeable interconnected world.
