

[Mitra Esfandiarei, PhD](#), is an assistant professor of Biomedical Sciences at Midwestern University in Arizona, USA, and an adjunct professor of Pharmacology & Therapeutics at the University of British Columbia in Vancouver, Canada. She has obtained her BSc in Microbiology with High Distinction from Tehran University and earned a Masters in Medical Microbiology from Razi Vaccine and Serum Research Institute in Iran, and a PhD degree in Pathology & Laboratory Medicine from the University of British Columbia in Canada. She then finished a Postdoctoral Fellowship in Pharmacology at the Child & Family Research Institute in Canada, before taking an Assistant Professor position in USA. Her research has a focus on understanding the underlying mechanisms contributing to the progression of aortic aneurysm, and the protective effects that exercise may have on the disease process in both laboratory animal models and human patients. Dr. Esfandiarei's research is supported by the Canadian Institutes of Health Research, Rare disease foundation, and the Marfan Foundation.
