

## **Biography**

**Dr. Neji HASNI** received a Specialized Master Degree (S.M.D) in transmission (telecommunication) in 1995 and Dual Master of Science degrees (M.S. in Computer Science “Software Engineering”, and M.S in Information Technology Management), from the Naval Postgraduate School –USA- in 2003. He earned also a PhD in telecommunication with distinction from the Tunisian National School of Engineering. He worked as a researcher in the Software Engineering Laboratory at the Naval Postgraduate School –USA; and so far, he is the chairman of the technologic complex of laboratories at the Tunisian Naval Academy. Dr. Neji HASNI developed a math-model for impact of e-commerce on overall economies. Besides, he built a pilot ontology for the interoperability of software development tools. He was among the pioneer to first introduce the ontologies for the Geographical Information Systems (GIS) to the master students in “geomatics”, and he is still teaching them to the “Remote sensing and Geographical Information Systems” master classes at Mannouba University in Tunisia. He also has popular articles and books published by the NASA as well as other international journals.
