

Dr. Debdatta Saha is an economist by training. She has completed her doctoral work in applied game theory and industrial organization from the Indian Statistical Institute, New Delhi. She currently teaches advanced microeconomics and industrial organization at the Faculty of Economics, South Asian University, New Delhi. As part of her doctoral work, she worked on game theoretic models of coordination and information revelation, with reference to standardization in network industries. She has experience of working in some aspects of industrialization in developing countries, including a brief stint as an Expert with the Competition Commission of India. Her research interests include organizational problems of small enterprises, competition issues such as abuse of dominance by dominant firms, predatory pricing, cartel detection and coordination games. She has worked on the economics of the food processing industry in Bihar through an international project funded by the International Growth Centre (IGC, London), jointly with Dr. Barna Ganguli. Among her other current research projects is the assessment of risk perception among entrepreneurs, industrial exit and measurement of innovation quality in the pharmaceuticals industry.
