

Georgios Giotis is currently a Master of Applied Science (M.A.Sc) student and teaching assistant in the Civil Engineering Department at the University of Toronto. He holds a Diploma with Honours in Civil Engineering from the Aristotle University of Thessaloniki. His research interests focus on structural and earthquake engineering and his research is related to hybrid testing of reinforced concrete structures where analytical simulations are combined with experimental testing for the performance assessment of structures. During his undergraduate studies, he participated in various extra-curricular activities, among which the most noticeable is the participation in the Forecast Engineering Summer School organised by the Bauhaus University of Weimar and the participation in the Board of European Students of Technology (BEST).
