

Lupu-Dima, Lucian (Timisoara, 31 May 1968)

I was born in Timisoara. I grew up in Petrosani. I graduated from University of Petrosani, where I also obtained the PhD title in electrical engineering.

I am married and I have a daughter.

I believe it is important for us to understand what we know and what we do not, that being a guiding principle for me. I consider that tolerance and equilibrium lead to progress and that is why I try to be a factor of development and of evolution for the society.

After graduation, in 1996, I worked in a coal preparation factory. After 3 years I was employed at a software development company, where, after 4 years, in 2000, I became manager. In the meantime, I started the doctoral studies and I finished them in 2004 with the thesis: „**The management of energy supply and distribution systems in coal preparation plants towards an improvement of the reliability in operation and a diminution of the energy loss.**”

The PhD thesis is the result of many years of research and was finalised with solutions regarding the development of a management system and with important theoretical conclusions.

The management activity allowed me to identify diverse opportunities. In 2004 I opened a consulting company, in the field of quality, environmental, OHSAS, information management and IT.

In my desire to support the youngsters in their learning process, I accepted students in internships at my company, and later I became University associated teacher. In 2012 I became lecturer at the University of Petrosani.

I wrote 3 books, 8 ISI articles, 12 BDI articles, 13 articles in national publications and I have accumulated 25 citations in national and international papers.

In my spare time I love to take pictures and to never lose contact with nature.
