

Nassim Djabou

Born on 18/12/1982, Tlemcen (Algeria).

Research professor at the University of Tlemcen (Algeria) in the field of Chemistry of Natural Products, particularly the chemical composition and variability of volatile components of plants.

Having obtained two PhD, first in University of Tlemcen (Algeria) in the field of Chemistry of Natural products, and the other at the University of Corsica (France) in the field of Organic and Analytical Chemistry, I continued my research and I got the rank of Lecturer, Ability to direct searches in 2013.

Currently I am interested in the field of professional training and business creation in the disciplines of natural plant products (Essential Oils, Hydrosols, Flavour, Fragrances, Aromatic and Medicinal Plants ...), and the goal is to make the region of Tlemcen (Algeria) an international pole in the production, characterization and development of plant natural products.

Another goal of my research is the establishment of a Mediterranean network for characterization and recovery of PPAM (Plants for Perfume, Aromatic and Medicinal) endemic to the countries of the Mediterranean basin.
