

Wayne Henderson is a full-time lecturer of Geological Sciences at California State University, Fullerton (CSUF) and is an adjunct faculty member for Glendale Community College. His research and interests include paleontology, sedimentology, stratigraphy, paleoclimatology, and geoscience education. Wayne completed a BS in Geology and a BA in History at The George Washington University in 1997, an MS in Geology from Louisiana State University in 1999, and was a PhD student at University of California, Riverside. In 2001, he began a teaching career at CSUF as a part-time faculty and was elevated to full-time lecturer in August of 2007. He has done field research in New Zealand on paleoclimatology of lake beds; Australia, Brazil, Greece and southern California on geoscience education; Louisiana on Holocene shell beds, Wisconsin, Minnesota, Washington, DC on saukiid trilobites, and the Death Valley area of California on the stratigraphy and sedimentology of the Carrara Formation. He has two daughters, one son, and many, many pets.
